Figure 1 shows a screenshot of a software interface for "Construction Engineering Design" (建设工程设计). The interface is divided into several panels. The top panel displays a project overview with fields for "Project Name" (项目名称), "Project Location" (项目地点), "Project Type" (项目类型), and "Project Status" (项目状态). The middle panel shows a list of design tasks with columns for "Task Name" (任务名称), "Task Description" (任务描述), "Task Status" (任务状态), and "Task Priority" (任务优先级). The bottom panel provides a detailed view of a specific task, including a "Task Description" (任务描述) and a "Task Status" (任务状态) section. The interface is designed for managing construction engineering design projects.

Figure 1 shows a sample form for the 'Construction Safety Management' (建筑工程施工管理) section. The form is divided into two main columns. The left column contains a list of items to be managed, including 'Safety Management', 'Quality Management', 'Environmental Management', 'Social Management', 'Labor Management', 'Material Management', 'Equipment Management', 'Transportation Management', 'Fire Management', 'Security Management', 'Public Relations Management', 'Complaint Management', 'Emergency Management', 'Information Management', 'Document Management', 'Contract Management', 'Financial Management', 'Legal Management', and 'Other Management'. The right column contains a table for 'Safety Management' (安全管理) with columns for 'Item' (项目), 'Content' (内容), 'Status' (状态), and 'Remarks' (备注). The table is currently empty. Below the table, there is a section for 'Safety Management' (安全管理) with a title '安全管理' and a subtitle '安全管理'.
