Figure 1. Schematic representation of the 1000 Genomes Project. The project aims to generate a high-resolution map of genetic variation across the human genome. The map is based on data from 1000 individuals from 26 populations. The data is organized into a hierarchical structure, with the top level representing the 1000 individuals, the middle level representing the 26 populations, and the bottom level representing the genetic variation across the genome.
